Worker’s Inquiry – Against Capital and Tronti’s Structure of Capital

(Automobile -scooter strike against the supervisor on the phone, 1960 – 71, Italian sector of factories in the background)

By Antonio Negri and Mario Tronti

I. Capital is a Plan of Organisation

In fact then capital is the plan of organization, an organic composition of capital, which has sides to it like a management, and supervisor and even a firm and company which captures clientele and forms a company-form and even dictates to the state and their own state power to attack the working class.

II. Against Capital – a Worker's Inquiry

In fact then begin with Marx as a inquiry – we inquire into the conditions of work, conditions of labour-contract, even exploitation-forms and money-wage forms and types of housing issues and such series which becomes today the crisis of lived labour against capital.

III. My Own Health

In fact then my own health is because of in fact helping labour and helping working class people – that then is when I am happy – if I go against the

workers – I side with capital and that is then becoming superficial.
